Document 1: GPT4 Technical Report OpenAI Abstract We report the development of GPT4, a largescale, multimodal model which can accept image and text inputs and produce text outputs. While less capable than humans in many realworld scenarios, GPT4 exhibits humanlevel performance on various professional and academic benchmarks, including passing a simulated bar exam with a score around the top 10 of test takers. GPT4 is a Transformer based model pretrained to predict the next token in a document. The posttrain...

GPT4 is a largescale, multimodal model which can accept image and text inputs and produce text outputs. While less capable than humans in many realworld scenarios, GPT4 exhibits humanlevel performance on various professional and academic benchmarks, including passing a simulated bar exam with a score around the top 10 of test takers. The report includes an extensive system card after the Appendix describing some of the risks we foresee around bias, disinformation, overreliance, privacy, cybersecurity, proliferation, and more. It also describes interventions we made to mitigate potential harms from the deployment of GPT4, including adversarial testing with domain experts, and a modelassisted safety pipeline.
